## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136 (a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 2875

***Priority***

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

***Specification***

1. The abstract of the disclosure is objected to because it has at least one run-on sentence. Correction is required. See MPEP § 608.01(b).

***Claim Rejections - 35 U.S.C. § 112***

2. Claim 6 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

- 1.) In claim 6, the applicant claims the DC power source is a photocell. The claim should read the DC power includes a photocell since a photocell is not a type of DC power source.

Art Unit: 2875

***Claim Rejections - 35 U.S.C. § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in-

- (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or
- (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

4. Claims 1-5 are rejected under 35 U.S.C. 102(e) as being anticipated by Hegarty. Hegarty discloses a base with an opening it. At least one semiconductor and DC power source is disposed in the base. A transparent refractive body is further mounted to the base to enable an incident light from the semiconductor luminotron to have long propagation.

***As best understood the following prior art rejection applies.***

***Claim Rejections - 35 U.S.C. § 103***

Art Unit: 2875

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Hegarty.

Hegarty discloses the claimed invention except for the teaching the DC power source includes a photocell. It would have been obvious to one skilled in the art at the time the invention was made to use a photocell to activate the light source of Hegarty since the examiner takes official notice that photocells are well known in the art for conserving energy and for automatically turning on a light source in darkening conditions.

### ***Prior Art***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Mizumo et al, Bennington, Schaffer, Pittman and Hasness all disclose illuminating devices which are similar to applicant's invention.
